BESTLINK COLLEGE OF THE PHILIPPINES
BULACAN CAMPUS
SCHOOL MANAGEMENT SYSTEM (College Coordinator Management)

College Coordinator Bestlink College of the Philippines - Bulacan Campus

Subject: Request for an Interview

Dear Ma'am/Sir,

Magandang Buhay!

We are fourth-year Bachelor of Science in Information Systems (BSIS) students from Bestlink College of the Philippines – Bulacan who are currently conducting our undergraduate thesis as part of the requirements for the completion of our degree.

We respectfully request your permission to conduct an interview with you regarding our proposed system. The purpose of this interview is to gather additional information and gain a better understanding of the current coordination processes, administrative procedures, and responsibilities of the Research Coordinator. The information you provide will help us improve our proposed system and ensure that it effectively addresses the actual needs and requirements of the office.

The interview will take approximately 15–20 minutes and will be conducted on your most convenient date and time. We assure you that all information shared during the interview will be treated with strict confidentiality and will be used solely for academic and research purposes.

We sincerely appreciate your valuable time, support, and willingness to assist us in our study. We look forward to your favorable consideration of this request.

Thank you very much, and we hope to meet with you soon.

Respectfully yours,

Anda, Alliah Kasadra A.
Dimatingkal, Johary D.
Garcia, John Carlo T.
Torres, Micaella Sayurie

Introduction

Educational institutions use information systems to improve the quality and efficiency of their academic and administrative services. These systems help organize records, improve communication, and support better decision-making while reducing manual work.

At Bestlink College of the Philippines – Bulacan Campus, the Research Coordinator may be responsible for coordinating research-related activities, monitoring research projects, organizing research documents, tracking submission deadlines, and preparing research reports. These tasks require accurate records, proper documentation, and effective coordination with faculty members, student researchers, and relevant academic offices.

Currently, research-related tasks may be handled using manual documents, Microsoft Excel, Google Drive, printed records, and messaging applications. While these tools are useful, managing information across different platforms can make it difficult to organize research documents, monitor project progress, track deadlines, retrieve information, and prepare reports efficiently.

To address these challenges, the researchers propose the Bestlink College of the Philippines – Bulacan Campus School Management System **(Research Coordinator Management)**. This web-based system will provide a centralized platform for managing research-related activities, including dashboard monitoring, research project management, researcher records, research documentation, submission tracking, progress monitoring, and report generation.

The proposed system aims to help the Research Coordinator manage research information more efficiently by providing an organized and accessible platform. It is also expected to improve research coordination processes and serve as a reference for future studies on educational information systems.

Background of the Study

Bestlink College of the Philippines was established in 2002 to provide accessible and affordable quality education. As the institution continues to develop its academic programs and research activities, effective research coordination and documentation become important in supporting organized and efficient research management.

The Research Coordinator may handle various responsibilities, including monitoring research projects, coordinating with researchers, organizing research documents, tracking project progress and submission deadlines, and preparing research-related reports. These activities require a systematic approach to ensure that research information is properly maintained and easily accessible when needed.

Currently, research-related records and activities may be managed through manual documents, Microsoft Excel, Google Drive, printed records, and messaging applications. Although these tools can support basic recordkeeping and communication, using multiple platforms may create difficulties in maintaining organized records, monitoring project progress, tracking submissions, retrieving documents, and preparing reports.

To address these challenges, the researchers propose the **Bestlink College of the Philippines – Bulacan Campus School Management System (Research Coordinator Management)**. This web-based system will centralize research coordination functions, including research project management, researcher information management, documentation, submission tracking, progress monitoring, and report generation.

Objectives

The main objective of the proposed Bestlink College of the Philippines – Bulacan Campus School Management System (Research Coordinator Management) is to improve the efficiency of research coordination by providing a centralized web-based platform for managing research-related activities and information.

Specifically, the system aims to:

- Simplify research coordination tasks, including research project management, researcher records, documentation, and submission tracking.
- Centralize research records and documents to improve organization, accuracy, security, and accessibility of information.
- Monitor research project progress, submission deadlines, and completion status.
- Improve the organization and retrieval of research documents and related information.
- Automate research report generation and information retrieval to save time, improve accuracy, and support better decision-making.

Goals

The main goal of the proposed Bestlink College of the Philippines – Bulacan Campus School Management System (Research Coordinator Management) is to improve research coordination and administrative efficiency through a centralized web-based platform.
Specifically, the system aims to:

- Improve research management by reducing manual work and simplifying research coordination tasks.
- Provide accurate, secure, and accessible research information through centralized record management.
- Support better monitoring of research projects, submission deadlines, and project completion.
- Enhance coordination among the Research Coordinator, faculty members, student researchers, and other relevant academic offices.
- Improve the preparation of research-related reports and the monitoring of research activities.

Proposed System

The proposed Bestlink College of the Philippines – Bulacan Campus School Management System (Research Coordinator Management) is a web-based information system designed to simplify and improve the research-related responsibilities of the Research Coordinator. The system provides a centralized platform for managing research projects, organizing research records, monitoring project progress, tracking submissions and deadlines, maintaining research documentation, and generating reports.

It includes modules for **Dashboard Overview, Research Project Management, Researcher Management, Research Documentation Management, Submission and Deadline Tracking, Research Progress Monitoring, Research Activity Management, and Report Generation**. By integrating these functions into a single platform, the system aims to improve efficiency, reduce manual work, enhance data organization, and support better research coordination and decision-making within Bestlink College of the Philippines – Bulacan Campus.

Proposed Features

The Bestlink College of the Philippines – Bulacan Campus School Management System (Research Coordinator Management) is a web-based system designed to help the Research Coordinator manage research-related activities and administrative tasks more efficiently. It serves as a centralized platform for organizing research records, monitoring project progress, managing documentation, tracking submissions, and generating reports.

The system includes modules for:

- Dashboard Overview
- Research Project Management
- Researcher Management
- Research Documentation Management
- Submission and Deadline Tracking
- Research Progress Monitoring
- Research Activity Management
- Report Generation

The system is intended only for the Research Coordinator's research-related coordination and administrative responsibilities. It does not include enrollment, grading, accounting, payroll, library management, or other institutional services outside the scope of the study. Research ethics review, formal proposal approval, and other specialized research functions are also excluded unless they are confirmed to be part of the Research Coordinator's authorized responsibilities. Future versions may be expanded to integrate with other school management systems.

Conclusion

The Bestlink College of the Philippines – Bulacan Campus School Management System (Research Coordinator Management) is a web-based information system designed to support the research-related coordination and administrative tasks of the Research Coordinator. It provides a centralized platform for managing research projects, organizing research documents, monitoring project progress, tracking submissions and deadlines, and generating reports, helping replace manual and fragmented processes with a more organized and efficient digital system.

The proposed system includes the following key modules: Dashboard Overview, Research Project Management, Researcher Management, Research Documentation Management, Submission and Deadline Tracking, Research Progress Monitoring, Research Activity Management, and Report Generation. These modules help organize research records, monitor project activities, manage submission deadlines, and simplify research report preparation.

The system is intended only for the Research Coordinator's research-related responsibilities. It does not cover enrollment, grading, accounting, payroll, library management, or other school operations outside the scope of the study. Future enhancements may include additional research management functions and integration with other institutional systems.
